Q11	C	Q12	C	Q13	B	Q14	C	Q15	B
Q16	D								

1

Threat Assessment

Situational Awareness

The baseline level of situational awareness that a security guard should maintain at all times while on duty is:

- A. White — relaxed and at ease, conserving energy between incidents
- ✓ B. Yellow — relaxed alertness, aware of surroundings without fixation on a specific threat
- C. Orange — focused attention on a specific identified potential threat
- D. Red — prepared to immediately take action against a confirmed threat

B

2

Threat Assessment

Pre-Incident Indicators

Observable behavioral pre-incident threat indicators include:

- A. Wearing clothing that is appropriate for the weather and the location
- ✓ C. Photographing the building's security cameras and documenting guard patrol patterns
- B. Entering through the main public entrance without stopping
- D. Proceeding directly to a destination without any apparent hesitation or delay

C

3

Threat Assessment

BSIS Training Manual

When a guard identifies a credible potential threat at their post, the first priority is:

- A. Independently confront the identified threat to resolve it before it escalates
- ✓ B. Notify dispatch or their supervisor and request backup before engaging the threat
- C. Document the observation in the shift log and continue patrol without intervening
- D. Wait for the threat to escalate to a confirmed incident before reporting

B

4

Threat Assessment

BSIS Training Manual

The most important initial indicator to observe when approaching an unknown subject is:

- A. The subject's facial expression and apparent emotional state
- ✓ B. The subject's hands — hands are the primary source of potential threat
- C. The subject's clothing style and apparent socioeconomic status
- D. The subject's race and gender — the statistically highest risk factors

B

5

Safe Subject Contact

BSIS Training Manual

The recommended distance a guard should maintain from an unknown subject during an initial contact is:

- A. 1 to 2 feet — close enough to maintain full physical control if needed
- ✓ B. 6 to 10 feet — a reactionary gap that provides time to respond to a threat
- C. 15 or more feet — maximum distance to minimize all physical risk
- D. At the guard's discretion — distance should be adjusted based on individual circumstances

B

6

Safe Subject Contact

BSIS Training Manual

When approaching a potentially hostile subject, a guard should position themselves:

- A. Directly in front of the subject — a commanding frontal stance establishes authority
- ✓ C. At a 45-degree angle to the subject — reduces target profile and improves reactionary options
- B. Directly behind the subject — reduces the subject's ability to see the guard's approach
- D. Beside the subject with a hand placed on their shoulder to establish control

C

7

Safe Subject Contact

BSIS Training Manual

A guard should **NEVER** approach a potentially threatening subject without first:

A. Completing a full written incident report documenting the basis for the contact

✓ **C. Ensuring they have a means of communication, a clear exit, and backup available or requested**

B. Obtaining explicit written authorization from the property owner or manager

D. Reviewing the subject's prior incident history with the property management team

C

8

Cover & Concealment

BSIS Training Manual

The critical distinction between cover and concealment is that:

A. Cover hides you from view but does not stop projectiles; concealment provides ballistic protection

C. Cover and concealment are functionally identical — both provide equivalent protection

✓ **B. Concealment hides you from view but does not stop projectiles; provides a barrier that can stop projectiles**

D. Cover applies only to firearms threats; concealment is effective against other types of threats

B

9

Blood Borne Pathogens

OSHA 29 CFR 1910.1030

Under OSHA blood borne pathogen standards, a security guard must assume that:

A. Only visibly blood-stained materials pose a transmission risk

C. Gloves are only required when direct contact with blood is highly likely

✓ **B. All blood and body fluids from any person may be infectious — so all precautions apply universally**

D. HIV is the only blood borne pathogen of practical concern in a security context

B

Blood Borne Pathogens

OSHA 29 CFR 1910.1030

10

The minimum personal protective equipment (PPE) a guard must use before any contact with blood or body fluids is:

- A. A full-face shield and protective gown
- C. Safety glasses only

✓ B. Disposable gloves

D. No PPE is required unless the blood is confirmed to be from an infected person

B

Blood Borne Pathogens

OSHA | Cal/OSHA

11

If a guard is exposed to blood or body fluids during an incident, they should immediately:

- A. Complete the incident report and mention the exposure as a footnote
- ✓ C. Wash the affected area thoroughly with soap and water, notify their supervisor, and seek prompt medical evaluation

- B. Wait until the end of shift to report the exposure to their supervisor
- D. Disinfect the area with hand sanitizer and continue their shift without interruption

C

Environmental Hazards

Cal/OSHA

12

A guard detects a strong odor of natural gas at their post. The correct immediate action is:

- A. Locate the source of the leak and attempt to seal it to prevent further dispersal
- ✓ C. Evacuate the area immediately without using any electrical switches or radio — then call 911 from a safe distance

- B. Use the radio to report the odor while simultaneously investigating the source
- D. Document the observation in the shift log and notify the property manager at the next available opportunity

C

13

Safety Awareness

BSIS Training Manual

Before beginning any shift, a security guard should:

- A. Arrive at the post and begin patrol immediately to maximize coverage time
- C. Wait for the outgoing guard to complete a comprehensive verbal and written shift briefing

✓ **B. Complete a pre-shift check of all assigned equipment and confirm communication functionality**

- D. Review only the written post orders — verbal briefings from outgoing guards are not required

B

14

Safety Awareness

BSIS Training Manual

The tactical practice of never allowing two guards in the same patrol area to position themselves in a straight line is called:

- A. Situational mirroring

✓ **C. Tactical L positioning — reduces the risk of both guards being affected by a single threat**

- B. Tactical distancing

- D. Zone suppression protocol

C

15

Review

BPC §7583.6 | Officer Safety

A guard observing a person engaging in pre-incident surveillance behavior — photographing access points and watching patrol patterns — should:

- A. Confront the person immediately to deter the behavior before it progresses
- C. Ignore the behavior unless the person commits an overt act that constitutes a crime

✓ **B. Document the specific behaviors observed and contact their supervisor to determine the appropriate response**

- D. Wait for confirmation of criminal intent before documenting or reporting the observation

B

16

Review

PPO License | BPC §7583.6

MACCESS INC.'s California Private Patrol Operator license number — required to appear on all BSIS Certificates of Completion — is:

A. #112233

B. #100001

C. #133445

✓ D. #122729

D

SCORING GUIDE & INSTRUCTOR NOTES

Passing Score

100% — all 16 questions correct required per BPC §7583.6(b)

Failed Assessment

Full retake required. Student must review all course modules before retaking.

Certificate

Issue Certificate of Completion ONLY upon 100% score. Sign, date, and retain a copy.

Record Retention

Retain each student's assessment record for duration of employment. Available to BSIS on request per Title 16 CCR §643(b).

Confidentiality

This answer key is for MACCESS INC. instructor use only. Never share with students before, during, or after assessment.

Live Scan

Live Scan integration is pending equipment acquisition. When active, completed LS records will be stored alongside training records.
